

Laith Shams Ali

Computer Science student

A fourth-year Computer Science student passionate about software development, I enjoy working in a team and learning from people with different experiences. In addition, I like to work on challenging projects where I can learn something new or improve my skills, and solving problems creatively while working with new technologies is a relish for me. Though I'm better at back-end development than front-end, I aim to become a full-stack web developer.
